Empathy Map Canvas

Empathize & Discover — target user perspective

Date	31 January 2026	**Team ID**	
Project Name	F1 Racing Analytics	**Maximum Marks**	4 Marks

Persona: F1 fan / motorsport data enthusiast who wants to understand performance across drivers, teams, races and seasons.

This is a project-informed working persona based on the intended audience, not the result of formal user interviews.

SAYS	THINKS
• “Who is leading on points?” • “Which teams perform best across seasons?” • “Can I compare tyre strategies and podium results in one place?”	• “I want reliable figures that are easy to compare.” • “Charts should explain the story, not just show numbers.” • “Does the pattern change by season or team?”
DOES	**FEELS**
• Checks driver and constructor standings. • Switches between race results, maps and strategy charts. • Uses Top N filters to focus on leading drivers.	• Curious about hidden performance patterns. • Frustrated when data is scattered or charts are hard to read. • More confident when insights are clear and interactive.

User needs

• A single place to explore key F1 performance indicators.
• Clear labels, sensible chart sizing and responsive layouts.
• Useful filtering and tooltips without persistent loading or overlapping content.
• A concise driver leaderboard story explaining how Top N changes the view.

Design implication

Keep dashboard and story navigation simple, use consistent labels and colours, and give embedded Tableau views enough responsive space to load and remain interactive.
