PROJECT DESIGN PHASE-II

Customer Journey Map

Visitor journey through the F1 Racing Analytics website

Date	15 March 2026	**Team ID**	
Project Name	F1 Racing Analytics	**Maximum Marks**	2 Marks

Map the visitor’s experience across three stages: discover the website, explore the analytics, and interpret the driver story. Team ID is intentionally left blank.

Journey Phase	Stage 1 — Discover	Stage 2 — Explore	Stage 3 — Interpret
Actions	• Opens the website home page. • Reads the project introduction. • Chooses Dashboard or Story.	• Navigates to the dashboard. • Reviews KPI cards and charts. • Uses available chart filters.	• Opens the driver leaderboard story. • Adjusts the Top N control. • Compares driver points.
Touchpoints	Home page, navigation bar, overview section and Explore Dashboard link.	Embedded Tableau dashboard, KPI cards, charts, legends and tooltips.	Embedded Tableau story, driver points bars and Top N filter.
Customer Thought	“What can this project tell me about Formula 1?”	“Which teams, drivers and race patterns stand out?”	“How does the leaderboard change when I choose a different Top N?”
Customer Feeling	Interested; needs a clear starting point.	Curious; may feel confused if charts are slow or crowded.	Engaged when filtering works and the ranking is easy to understand.
Process Ownership	Website / front-end developer.	Tableau dashboard creator and website maintainer.	Tableau story creator and website maintainer.
Opportunities	Use a strong F1-themed hero, concise introduction and clear navigation.	Ensure responsive embed sizing, readable labels, sensible loading behaviour and links to Tableau Public.	Explain Top N briefly, keep the control visible and ensure the story updates without overlap.

Journey outcome

The visitor should be able to move from the home page to the dashboard and then to the driver story, understand the main F1 performance patterns, and use the Top N control to focus the leaderboard.

Note: Customer thoughts and feelings are informed design assumptions based on the project use case, not results from a formal customer study.
