PROJECT DESIGN PHASE-II

Data Flow Diagram & User Stories

F1 Racing Analytics — system data flow and user-facing requirements

Date	31 January 2026	**Team ID**	
Project Name	F1 Racing Analytics	**Maximum Marks**	4 Marks

Data Flow Diagrams

A DFD shows how F1 source data enters the system, is connected and analysed, and is presented to the website visitor. This project is a read-only analytics experience; no login, registration or data-entry workflow is included in the confirmed scope.

Element	Project role	Input / Output
External Entity: F1 Analytics Visitor	Chooses Home, Overview, Dashboard or Story and uses available Tableau controls.	Input: page navigation, filter selections, Top N choice. Output: charts, KPIs and story visuals.
Process 1: Load F1 Source Files	Connects the provided CSV/text files to Tableau.	Input: structured F1 records. Output: connected dataset.
Process 2: Analyse & Aggregate Data	Uses Tableau fields, measures, aggregations and filters to calculate performance views.	Input: connected dataset. Output: points totals, rankings, tyre/podium/DNF/country summaries.
Data Store: Source Dataset Files	Original structured files used by the Tableau workbook.	Contains race, driver, team and other F1 records available in the project dataset.
Process 3: Publish Tableau Views	Publishes dashboard and driver leaderboard story to Tableau Public.	Output: shareable published dashboard and story URLs.
Process 4: Render Website Pages	Bootstrap-based website embeds published Tableau views.	Output: visitor can view and interact with supported Tableau controls.

Level 0 flow

Visitor → Website navigation → Embedded Tableau Dashboard / Story → Filtered visual insights. Source files → Tableau connection and analysis → Published Tableau views → Website embeds.

User Stories

User Type	Functional Requirement (Epic)	Story No.	User Story / Task	Acceptance Criteria	Priority	Release
F1 fan / visitor	Explore dashboard	US-1	As a visitor, I want to open the F1 dashboard so I can explore the project's performance metrics.	Dashboard appears within its embed area and the published view is available to interact with.	High	Release 1
F1 fan / visitor	Explore driver leaderboard	US-2	As a visitor, I want to view the driver points leaderboard so I can compare drivers.	Driver names and points are visible and the ranking can be read without overlap.	High	Release 1
F1 fan / visitor	Top N filtering	US-3	As a visitor, I want to adjust the Top N control in the driver story so I can focus on a selected number of drivers.	Changing Top N updates the visible leaderboard when supported by the published Tableau story.	High	Release 1

User Type	Functional Requirement (Epic)	Story No.	User Story / Task	Acceptance Criteria	Priority	Release
F1 fan / visitor	Explore team performance	US-4	As a visitor, I want to compare team performance and championship results across seasons.	Relevant team ranking and season views are available in the dashboard.	High	Release 1
F1 fan / visitor	Explore race insights	US-5	As a visitor, I want to inspect tyre compounds, podiums, DNF reasons and country participation.	The corresponding analysis views are accessible and have readable labels.	Medium	Release 1
Website maintainer	Reliable embedded views	US-6	As a maintainer, I want the embedded Tableau views to fit the page responsively so visitors can use them on different screen sizes.	Embed containers resize appropriately and do not cause persistent overlap or hide key controls.	High	Release 1

The stories are tailored to the implemented analytics website. Account registration, payment, customer-care and administrator workflows from the generic template are not applicable to this read-only project.
