PROJECT DESIGN PHASE-II

Solution Requirements (Functional & Non-functional)

Requirements for the F1 Racing Analytics website and embedded Tableau views

Date	31 January 2026	**Team ID**	
Project Name	F1 Racing Analytics	**Maximum Marks**	4 Marks

Functional Requirements

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-task)	Priority
FR-1	Data Access & Integration	Connect the provided F1 CSV/text files to Tableau and use the published Tableau dashboard and story URLs in the website.	High
FR-2	Data Processing	Prepare and aggregate driver, team, race, tyre, podium, DNF and country-related fields required by the workbook. Use suitable joins/unions only where the source structure requires them.	High
FR-3	Business Analysis	Calculate and display driver points, team rankings, championship-by-season comparisons and the counts or summaries represented by the workbook KPIs.	High
FR-4	Business Insights & Analytical Outputs	Provide the main F1 Racing Analytics dashboard and the Driver Points Leaderboard story, along with tyre compound, country participation, podium and DNF analysis.	High
FR-5	User Interaction & Analysis	Allow visitors to navigate between website sections and use interactive Tableau controls, including the Top N parameter/filter in the driver story when available.	High
FR-6	Data Update & Reporting	Display the currently published Tableau views. When the source workbook is updated and republished, the website should continue to point to the valid published views.	Medium

Non-functional Requirements

NFR No.	Requirement	Description
NFR-1	Usability	Use clear navigation, readable chart labels, consistent styling and straightforward access to Dashboard and Story.
NFR-2	Security	Use public, non-sensitive analytics data only; do not expose private credentials or embed secrets in client-side code.
NFR-3	Reliability	Show the published Tableau view correctly and provide a useful fallback or link if the embedded content cannot load.
NFR-4	Performance	Avoid unnecessary scripts and excessive fixed sizing; load Tableau embeds in appropriately sized containers.
NFR-5	Availability	Website embeds depend on internet access and availability of Tableau Public and the published workbook.
NFR-6	Scalability	Use responsive layout and reusable page sections so the website can accommodate more analysis views and screen sizes.

These requirements describe intended behaviour and quality goals for the current project; they are not claims that performance or availability has been formally tested.
