BUSINESS QUESTIONS & VISUALISATION REPORT

F1 Racing Analytics | Tableau Project

Date	22 October 2026
Team ID	
Project Name	F1 Racing Analytics
Maximum Marks	5 Marks

Introduction

Visualization development transforms the F1 racing dataset into visual views that help audiences compare driver and team performance, explore race outcomes and reliability, and examine tyre strategies, podium finishes and country-wise participation. The questions below are based on the Tableau worksheets and dashboard elements built for this project.

Business Questions and Visualisations

No.	Business question	Visualisation used / recommended	What it helps reveal
1	Which drivers have the highest total points?	Horizontal bar chart — Driver Leaderboard Top 5 by Points	Compares driver point totals; the Top N parameter can expand or narrow the displayed leaderboard.
2	Which teams have accumulated the most points?	Horizontal bar chart — Team Performance Ranking	Ranks teams by cumulative points to compare overall team performance.
3	How do team points vary across seasons?	Team Championship Analysis — bars grouped by Team and Season	Shows season-by-season point patterns across teams.
4	Which DNF (Did Not Finish) reasons occur most often?	Horizontal bar chart — Driver Reliability: DNF Reasons	Compares recorded DNF reason counts, such as brake failure, collision, engine, gearbox, hydraulics and mechanical issues.
5	How are tyre-compound strategies distributed in the dataset?	Tyre Compound Analysis — pie chart of tyre strategy combinations	Shows the relative distribution of the tyre strategy combinations represented in the view.
6	Which countries are represented in race participation records?	Country-wise Participation — filled map	Shows geographic distribution of countries represented in the dataset.
7	Which drivers have the most podium finishes?	Podium Analysis — packed-bubble chart	Compares podium-finish totals by driver; bubble size communicates the measure used in the view.
8	How many teams, seasons, race outcomes and circuits are covered?	KPI cards — Competing Teams, Seasons in Play, Race Outcomes Logged, Circuits Showcased	Provides a quick overview of dataset coverage using the dashboard's four headline metrics.

Major observations from the project views

- **Dataset overview:** the dashboard KPI cards display 10 competing teams, 17 seasons, 6,464 logged race outcomes and 29 circuits.
- **Driver comparison:** the Top 5 points leaderboard allows the leading drivers to be compared directly, and the Top N control supports a user-selected leaderboard size.
- **Team comparison:** the Team Performance Ranking and Team Championship Analysis show team totals and season-level patterns from different perspectives.
- **Reliability:** the DNF chart compares categories of recorded failure or retirement reasons; the chart can be used to identify the most frequent recorded categories.
- **Strategy and participation:** the tyre-compound view and country map offer additional context beyond points rankings, while the podium view compares drivers by podium finishes.
