PROJECT DEVELOPMENT PHASE

Performance Test

Date	10 February 2026
Team ID	
Project Name	F1 Racing Analytics
Maximum Marks	

Project Performance Testing

The following entries document the F1 Racing Analytics Tableau dashboard and driver-points story using the project details available.

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	Dashboard overview KPIs: **10 competing teams**, **17 seasons**, **6,464 race outcomes logged**, and **29 circuits showcased**. Visuals cover DNF reasons, driver points, team rankings, team-by-season points, tyre strategy, country participation and podium finishes.
2.	Data Preprocessing	The dataset was connected to Tableau and fields were used to build the views. The visible workbook fields include Points, Positions Gained, Red Flag, Round, Safety Car Laps, Season, Total Distance Km, Total Race Time, Undercut Attempt, VSC Laps and Wind Speed Km/h. **Specific cleaning steps were not documented in the supplied project context.**
3.	Utilization of Filters	A **Top N** parameter/filter controls how many drivers appear in the Driver Leaderboard Top 5 by Points view. A **Finish Position** filter is present in Podium Analysis. Tableau dashboard filter cards are also visible for dimensions including Team, Tyre Strategy, Country, Driver and DNF Reason.
4.	Calculation fields Used	**SUM(Points)** for driver/team point totals; **COUNTD(Race Id)** for distinct race IDs in the reliability view; **AGG(Podium Finishes)** for podium analysis; and a **Top N** parameter/filter for leaderboard selection. The KPI sheets display counts for competing teams, seasons, race outcomes and circuits.
5.	Dashboard design	**No. of visualizations / graphs: 9 project views** (as specified by the project owner): four KPI cards, Driver Leaderboard Top 5 by Points, Team Performance Ranking, Team Championship Analysis, Tyre Compound Analysis, Country-wise Participation, Podium Analysis and Driver Reliability – DNF Reasons. The dashboard uses a dark website wrapper with the Tableau dashboard embedded.
6.	Story Design	**No. of visualizations / graphs: 1 primary view** — Driver Points Leaderboard. The story focuses on comparing driver points and uses the Top N control to change the number of drivers shown. The published Tableau story is available at the link below.
